### ESM 2. Summary and specific types of chemotherapy

<b>chemotherapy summary</b>	<b>specific chemotherapy substances</b>
Alkylating agents	Cisplatin, Carboplatin, Oxaliplatin, Temozolomid, Cyclophosphamide, Melphalan, Bleomycin, Chlorambucil, Estramustin, Mitomycin, Trabectedine
Antimetabolites	Pemetrexed, 6-Mercaptopurin, Cytarabine, Gemcitabine, Capecitabine
Mitotic inhibitors/Plant alkaloids	Vincristine, Vinorelbine, Docetaxel, Paclitaxel, Cabazitaxel
Antiandrogens	Bicalutamide, Leuprorelinacetat, Abiraterone
GnRH-Agonist	Goserelin
Corticosteroids	Prednisolone, Dexamethasone
Monoclonal antibodies	Rituximab, Obinutuzumab, PSMA-Lutetium-Ligand, Brentuximab, Daratumumab, Trastuzumab, Catumaxomab, Tafasitamab, Pertuzumab
Topoisomerase inhibitors	Irinotecan, Etoposid, Topotecan
Anthracyclines	Daunorubicin, Doxorubicin, Caelyx Epirubicin
Kinase/proteasome inhibitors	Imatinib, Masitinib, Cabozantinib, Palbociclib, Sorafenib, Erlotinib, Sunitinib, Nintedanib, Cetuximab, Tarceva, Bortezomib
VEGF inhibitors	Bevacizumab, Ramucirumab, Aflibercept
Immune checkpoint therapy	Nivolumab, Ipilimumab, Pembrolizumab, Atezolizumab
PSMA ligands	PSMA-Lutetium-177-Ligand, PSMA-Actinium-225-Ligand
Immune modulating agents (IMiDs)	Lenalidomid, Interferon
Antifolates	Methotrexate
Aromatase inhibitors	Letrozol, Exemestan
Others	Biphosphonates, Faslodex, Lipidol, Embocept, Mistletoe therapy, Asperaginase, Denosumab
