ESM 8. Frequency of chemotherapeutic agents in relation to the total number of chemotherapies

chemotherapeutic agents	n=310	(%)
alkylating agents	56	18.1
mitotic inhibitors	39	12.6
antiandrogens	36	11.6
antimetabolites	31	10.0
GnRH agonists	31	10.0
corticosteroids	24	7.7
monoclonal antibodies	17	5.5
anthracycline	16	5.2
PSMA ligands	14	4.5
kinase/proteasome inhibitors	13	4.2
topoisomerase inhibitors	10	3.2
immunecheckpoint inhibitors	9	2.9
IMiDs	8	2.6
antifolates	2	0.6
VEGF inhibitors	2	0.6
aromatase inhibitors	1	0.3
HIFU	1	0.3

Notes. Percentage is given in relation to the total number of 310 chemotherapies applied. A single patient received on average more than two chemotherapies. Abbreviations: n = number of chemotherapies; GnRH = gonadotropin-releasing hormone; VEGF = vascular endothelial growth factor; PSMA = prostate-specific membrane antigen; IMiDs = immunomodulatory imide drugs; HIFU = high intensity focused ultrasound.
