

ESM 5: Table E5*Fit of the Final Measurement Models*

	Construct	Invariance pre- and posttest	χ^2	<i>df</i>	RMSEA	CFI	SRMR
Well-Being/ Ill-Being	Positive Affect	strict	22.19	15	.07	.97	.08
	School Satisfaction	strong	59.31	24	.12	.90	.08
	Negative Affect	strong	39.20	25	.07	.97	.07
	School Anxiety	strict	25.63	15	.08	.89	.08
Adjustment/ Psychopathology	Emotional Symptoms	-	4.29	5	.00	1.00	.02
	Conduct Problems	-	0.53	2	.00	1.00	.01
	Peer Problems	-	6.78	5	.06	.99	.03
	Hyperactivity-Inattention	-	5.16	4	.05	1.00	.02
	Prosocial Behavior	-	2.83	5	.00	1.00	.02

Note. Adjustment and psychopathology were assessed at posttest only, which is why there were no tests of invariance. *df* = degrees of freedom; RMSEA = Root Mean Square Error of Approximation; CFI = Comparative Fit Index; SRMR = Standardized Root Mean Square Residual.
