Electronic Supplementary Material 6

Results of the scale mean comparisons between self- and other-rating of the BFI-K KJ (t-tests for dependent samples)

Scale	Sample	*M*	*SD*	*t*(*df*)	*p*
E	Self	2.32	1.03	2.96 (210)	< .01
	Other	2.10	1.02		
A	Self	2.91	0.62	0.59 (210)	.55
	Other	2.88	0.57		
C	Self	2.44	0.76	3.75 (210)	<.01
	Other	2.25	0.82		
N	Self	1.54	0.85	−0.08 (210)	.94
	Other	1.55	0.80		
O	Self	2.62	0.67	0.17 (210)	.87
	Other	2.61	0.70		

Note. E = Extraversion, A = Agreeableness, C = Conscientiousness, N = Neuroticism, O = Openness to Experience, *M* = mean value, *SD* = standard deviation, *t*-value with degrees of freedom (*df*), significance value *p* after Bonferroni correction: $p \leq .01$; $n = 211$
