*Figure S.1.* Scree plot of maximizing tendency scale. Two factors above the eigenvalues above 1 were extracted where Factor 1 explained 38.16% of the variance and Factor 2 explained an additional 6.47% of the variance. Based on the sharp elbow at Factor 2, a 1-factor solution for maximizing was retained.

*Figure S.2.* Scree plot of consideration for future consequences (CFC) scale. Two factors above the eigenvalues above 1 were extracted where Factor 1 explained 37.63% of the variance and Factor 2 explained an additional 5.82% of the variance. Based on the sharp elbow at Factor 2, a 1-factor solution for CFC was retained.

*Figure S.3.* Scree plot of consideration for generativity concerns (GC) scale. Four factors above the eigenvalues above 1 were extracted, where Factor 1 explained 29.82% of the variance, Factor 2 explained an additional 5.11%, Factor 3 explained an additional 3.02%, and Factor 4 explained an additional 2.34% of the variance. Based on the sharp elbow at Factor 2, a 1-factor solution for GC was retained.

*Figure S.4.* Scree plot of saving intentions scale. One factors above the eigenvalues above 1 were extracted. Factor 1 explained 54.86% of the variance. Based on the sharp elbow at Factor, a 1-factor solution for saving intentions was retained.
